The Future of Industrial Energy Efficiency Finance in China

Webinar Series for Industrial Excellence

Patrick D'Addario, Thomas K. Dreessen, Dilip Limaye, Bob Taylor
July 30, 2013
Agenda

1. Patrick D’Addario: Setting the scene
2. Thomas K. Dreessen: China’s energy efficiency finance landscape
3. Panel discussion: Dilip Limaye and Bob Taylor (discussants)
4. Q&A
5. Patrick D’Addario: Resources on industrial energy efficiency finance
Setting the Scene

Patrick D'Addario
Senior Advisor for Financial Products
The Institute for Industrial Productivity (IIP)
IIP’s Focus

Major Industrial Energy Consumers

- China 30%
- Rest of the World 53%
- United States 11%
- India 6%

Energy-intensive industries, such as...

- Cement
- Chemicals
- Iron & Steel

Industry

Government

Financial Institutions
The Chinese government’s industrial EE incentives*

Energy Savings Awards in 11th and 12th FYP plans for large and medium enterprises, and ESCOs

<table>
<thead>
<tr>
<th>Description</th>
<th>11th FYP – CNY (US$)</th>
<th>12th FYP CNY (US$)</th>
<th>New policy for ESCOs (2010) CNY (US$)</th>

<td>20,000</td>
<td>Not applicable</td>
</tr>
</tbody>
</table>

Other support

- Ten key energy projects
- Eliminating outdated capacity
- Energy savings projects
- ESCOs
  - 0 income tax for years 1-3; 50% income tax rate for years 4-6, on income from qualifying projects
  - VAT reduction

Patrick D’Addario

<td>4.7 (0.8)</td>
<td>83.6 (13.5)</td>
<td>125.0 (20.2)</td>
</tr>
</tbody>
</table>

The Ministry of Finance’s special fund for energy conservation and emissions reduction reportedly paid out CNY133 billion (US$21.5 billion) in incentive payments in the 11th FYP. The Climate Policy Initiative (CPI) at Tsinghua University reported additional funding from central and local governments for energy efficiency of CNY126 billion (US$20.4 billion).*

According to ACEEE’s Chittum and Nowak, in 2010, a total of US$879 million was spent on industrial energy efficiency by utilities (US$737 million), state agencies and public universities (US$74 million), nonprofit organizations (US$39 million), and the Federal Government (US$29 million).

China’s energy efficiency finance landscape

Thomas K. Dreessen
Chairman and CEO
Energy Efficiency Project, Investment Company Limited (EEPIC)
The China Energy Efficiency Financing Landscape Report

• Published by IIP in October 2012

• Authored by Thomas K. Dreessen, James Wang and EMCA

• Includes a literature review of China’s EE finance market, bank sector background, EE policy development, demand for financing, lending practices, debt financing and leasing for EEPs, credit enhancement programs, equity sources and EE financing products.

• See it at: www.iipnetwork.org/IIP-ChinaFinancingLandscape
Bank sector background

Local commercial banks (3 Tiers)

• Tier 1 ("Big 4"): SOEs & assets ~ US$ 300B
• Tier 2: Shareholders & assets ~ US$ 30B
• Tier 3: Provincial/city banks controlled by SOEs most active in EE and SME financing

Regulatory framework:

• PBOC: performs Central Bank functions
• CBRC: regulates/supervises banks, leasing & Gty. Cos.
• NDRC: FYPs and all national energy & EE policies
• MII: SME development and guarantee policies
EE policy development

- Mandatory targets in 12th FYP (2011-2015)
  - 16% decrease in energy consumption per unit GDP
- Restricts bank lending to industrial facilities in high-energy consumption sectors
- Encourages lending to EEPs
- Project financing business guidelines
- Energy-saving incentives for EEPs
- Demand-side management policy
- Special ESCO treatment and tax benefits
Demand for EE financing

- US$140 billion EE investments made in 11th FYP (2006-2010)
- 11th FYP EE investments mostly made by SOEs; ESCOs < 10%, but expected to grow to 25% in 12th FYP
- EEPs estimated to need US$40 billion of funding each year from bank loans or other sources
- 12th FYP national 16% targets broken down by province (see report) with consequences to leaders if not met
- Top 10,000 Enterprise Program in Dec 2011 targeting 17,000 companies with over 5,000 tce per year and over 60% of China’s total energy consumption

Thomas K. Dreessen
Bank lending practices

• EE lending is small part of bank loans
  - Less than 1%; a niche business to Tier 2 banks
• Ceiling on interest rates for commercial banks
  - Not higher than 90% of prime lending rate
• Standard credit evaluation procedures used
• 30% equity investment required
• 80% of loans require full collateral or approved 3rd party guarantees

Thomas K. Dreessen
Debt financing for EEPs – an overview

• Loans mostly made directly to large corporate entities (SOEs) that own/operate facilities with EEPs (Hosts)

• Loans booked on Host’s balance sheet

• Repayment of EEP loans not related to savings performance and thus not project-based

• 30-50% equity for most EEPs and SMEs

• Project loans generally not viable for EEPs
Debt financing for EEPs – by “LFIs”

**Domestic bank loans:**

- Working capital
- Fixed asset investments
- Trade finance
- Projects
- Mortgage
- Accounts receivable
- SME (new joint surety pilot by ICBC and Bank of Beijing)
Debt financing for EEPs – by “IFIs”

- World Bank (“WB”) CEEF Program
  - China Eximbank, Huaxia, China Minsheng Bank

- French Development Agency (“AFD”)
  - Shanghai Pudong Development Bank (“SPD”), Huaxia, China Merchants Bank

- Asian Development Bank (“ADB”)
  - Guangdong Province (2009), Shangdong Province (2011), Hebei Province (2012 projected closing)

- KfW Bank EE/RE Loan to China Eximbank
Leasing for EEPs

• Leases mostly sale leasebacks directly to large private companies and SOEs

• Most leasing companies require the same security as banks and thus are not a major ESCO financing option

• In 2011, World Bank US$133 million loan to 1 ESCO and 2 lease companies in Shandong Province for leases:
  - to ESCOs, industrial EEPs & equipment vendors
  - offered on EPC model with equipment as collateral
  - US$5 million max funding per project, 15%, 3-5 years

• Financial leasing not fully developed in China: only 0.83% of GDP in 2009 vs. 30% in US

Thomas K. Dreessen
Credit enhancement programs

• **IFC new SME risk sharing facility** in 2011 with 2 participating banks (SPDB & BRCB):
  - Targeted customers/EEPs: EE loan applicants of participating banks for all types of EEPs
  - Typical term: until end of IFC guarantee in 2018
  - Collateral: project assets

• **Insurance companies** established in 2003 mainly to underwrite credit risk on trade receivables for seller’s bankruptcy, insolvency or default (N/A to host EEPs due to no receivables)
Credit enhancement programs, continued

- **Guarantee companies**
  - accept slightly wider range of collateral than banks
  - can provide loan guarantees to select SMEs & ESCOs
  - some starting to explore the future receivables pledge model, constituting a significant technical risk

- **Huazun Investment & Credit Guarantee Company:**
  - introduced a financial service product solution in 2010 for ESCOs with future receivables pledged as collateral for loan guarantee.

- **National SME Guarantee Program**
  - Exempts operation tax for SME guarantee institutions
  - Stringent requirement on size and compensation
  - SME typically must provide counter guarantees
Equity sources of EE financing

- **CECEP**: only national SOE in 2010 to fund large EEPs
- **General Environment Industry Fund**:  
  - Established by national SOE in 2009 with US$8 million capital to raise US$400 million for EEPs as 1 of 4 areas  
  - Launched in 2011 a dedicated investment fund for EPC
- **Shiyin EC and Environmental Protection Fund**:  
  - Announced intention in 2011 intention to raise US$8 million
- **Good Hope Capital Co**: raising US$16 million for ESCOs
- **China CDM Fund**: no GHG project investments made as if mid 2011
- **PE & other equity funds**: little info available on EEP investments by PE funds

Thomas K. Dreessen
Other types of EE financing sources

- Energy performance contracting project trading:
  - China Beijing Environment Exchange (CBEEX) and EMCA launched China's first EPC investment and financing trading platform in 2010
  - Platform designed to provide project financing based on ESCOs EEP future savings receivables trades

- ESCO Association industry funding programs:
  - EMCA formed strategic cooperation partnerships with several banks and guarantee organizations; and arranged financing support for dozens of ESCOs
Summary of China EEP financing

• Like in most developing countries, China banks typically offer only asset-based lending, limited to 70% of capital cost requiring:
  - 30% equity investment in EEPs
  - 100% collateral or guarantees required on loan amount

• Like in most countries, LFIs not comfortable lending to EEPs without full guarantees or collateral AND no collateral value attributed to their savings

• Except for ~6 commercial banks that participated in IFI programs, few LFIs interested in EEPs or have internal capacity to evaluate their cash flow benefit

• Current partial credit risk guarantee and direct lending programs from IFIs rarely result in LFIs deviating from business-as-usual lending terms

Thomas K. Dreessen
Summary of China EEP financing – continued

• Debt terms from LFIs for EEPs are generally not attractive to ‘non-SOE’ Hosts and cannot be met by most ESCOs and SMEs because of the resulting reduction in their core business credit capacity

• Most ESCOs and SMEs have little ability to access loans for EEPs due to their limited financial capacity

• Primary barrier to accessing EEP loans from LFIs is guaranty and/or collateral requirements

• New risk-mitigating products needed to motivate LFIs to develop new lending products with commercially-attractive terms

Central, Hong Kong
Panel discussion

Dilip Limaye
President and CEO, SRC Global Inc. and Senior Advisor to the World Bank

Bob Taylor
Principal at Energy Pathways, LLC and former World Bank Energy Sector Leader of the East Asia and Pacific Region
Energy efficiency financing in China:
Recent innovations and future outlook

Dilip Limaye
President and CEO, SRC Global Inc.
Senior Advisor to the World Bank
China’s leading role in EE finance

• Strong government mandate for EE

• Successes in:
  - Developing a large ESCO industry
  - Engaging major banks in loan financing
  - Use of IFI credit lines and risk sharing programs
  - Introduction of leasing models

• Limitations
  - Banking sector regulations
  - Role of regional banks
  - Access to financing for small ESCOs
  - Financing EE in buildings and municipalities
Potential future innovations

Some wishful thinking?

• Reforming banking regulations to facilitate EE financing
• Using project cash flow as collateral
• Energy Saving Insurance – guaranteeing technical performance of EE equipment
• Capacity building of banks – loan officers and risk managers
• “Mainstreaming” EE finance as a business area
• Building capacity of small ESCOs in preparing “bankable proposals”
• Creating financing mechanisms for specialized sector-specific ESCOs
• Engaging utilities in financing and implementation of EE projects (EE obligations and DSM programs)
Energy efficiency financing in China:
A dynamic sector on the move

Bob Taylor
President, Energy Pathways, LLC
Converging events

• China is continuing its aggressive promotion of energy efficiency in industry, buildings and other sectors, with perhaps the most comprehensive set of government programs in the world

• Financial sector reform is on the agenda, with new reform breakthroughs possible during the next several years

• Accordingly, many domestic banks and other financial institutions are aiming to expand energy efficiency financing initiatives, building on pilot programs undertaken by about a half dozen banks over the last five years
New developments and trends

• Expanding loan financing for China’s large domestic ESCO industry, using new products and approaches, including use of previously executed energy performance contract project accounts receivable for new loan collateral

• Emergence of domestic financial leasing models for energy efficiency financing

• Increasing interest in development of energy efficiency project add-ons to large industrial loans

IIP should develop and disseminate case studies of emerging best practices of energy efficiency financing in China for both Chinese and international audiences.
